

Devin Teichrow, MSc

Epidemiologist, science writer, and research generalist helping labs, clinicians, health nonprofits, and science teams turn technical work into clearer websites, summaries, data outputs, and public-facing materials.

Good first projects

The best referral is narrow: a site that needs launching, a paper that needs public-facing language, or a data/writing cleanup task that has been sitting around because nobody quite owns it.

Lab website + auto publications

A clean public site for a PI, lab, center, or research project, with an optional PubMed-backed publications table.

- Home, people, research, publications, contact, and recruitment-ready pages
- Publication list from author, lab, topic, PMID, or query logic
- Copy cleanup so the work is clear without sounding like a grant abstract

Research visibility package

Plain-language communication for recent papers, grants, talks, webinars, recruitment pages, or center updates.

- Publication blurbs, project summaries, lab news items, and website copy
- Short posts or clip-ready text from papers, recorded talks, or research updates
- Useful for lab sites, LinkedIn posts, center newsletters, and funder-facing updates

Data / stats / writing cleanup sprint

A fixed-scope cleanup sprint for analysis, figures, code, methods language, or results interpretation.

- R or Python cleanup, reproducible reports, figure polish, and code review
- Methods/results language, interpretation notes, and limitations language
- Clear handoff notes so the work is usable after the sprint ends

GOOD REFERRALS

New faculty, small labs, centers, clinician-researchers, patient organizations, health nonprofits, research podcasts, and teams with public-facing research outputs that are stale, unclear, or too technical.

USEFUL BACKGROUND

MS in Epidemiology from UCLA; neurology research at UC Irvine; R/Python and web/data tooling; science writing through The Edge of Epidemiology; published work in migraine and Alzheimer's disease research.
